DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-24 and 26-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Whitin et al. (6,190,396). Whitin et al. disclose, in figures 1-10 and in col. 5, lines 10-36 and col. 7, line 20 to col. 8, line 61; a method of suturing patient tissue together (e.g., fig. 4), as claimed, and a suture placement device (10) or system, where the method and device or system include a body (20), a support on the body (e.g., 33, 34, 132, or 134), at least one engaging element (70) or needle displaceably mounted on the body, a suture holder (94) on the body and arranged to hold the end of at the least one suture element after it has been passed through tissue; and where the method includes side-to-side and end-to-side anastomoses between vessels (e.g., between duct, B, and target tissue, T).

Allowable Subject Matter

3. Claims 25 and 34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record, alone or in combination, a suture placement device or system having, inter alia, a body, a support on the body releasably arranged to hold an end of at least one suture element, at least one engaging element, and a suture holder on the body, where the support defines a plurality of seats releasably arranged to receive cuffs attached to ends of the suture elements.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Davis (989,234) and Ovil et al. (4,702,250) teach suture placement devices.
